

Child Care in America: 2016 State Fact Sheets

Introduction

Every week in the United States, child care providers care for nearly 11 million children younger than age 5 whose parents are working. On average, these children spend 36 hours a week in child care, and one quarter (nearly 3 million) are in multiple child care arrangements due to the traditional and nontraditional working hours of their parents.¹

Research has continually illustrated the importance of quality early experiences in achieving good health, especially within the most vulnerable populations. Families, child care providers and state and federal policymakers share responsibility for the safety and wellbeing of children while they are in child care settings. Basic state requirements and oversight help lay the foundation necessary to protect children and promote their healthy development while in child care.

Every week in the United States, child care providers care for nearly 11 million children younger than age 5 whose parents are working.

The Child Care and Development Block Grant (CCDBG) program serves approximately 1.45 million children annually in communities across the country. CCDBG is the primary federal grant program that provides child care assistance for families and funds child care quality initiatives. Funds are administered to states in formula block grants, and states use the grants to subsidize child care for low-income working families.

In November 2014, President Barack Obama signed S.1086, the Child Care and Development Block Grant Act of 2014 into law. The new law includes several measures focused on quality, including requiring states to:

- Promote quality child care by increasing activities to improve the care, enhancing states' ability to train providers and develop safer and more effective child care services.
- Strengthen health and safety requirements in child care programs and providers.
- Improve access to child care by expanding eligibility for participating families and helping families connect with quality programs that meet their needs by enhancing consumer education, providing greater options for quality child care and working to ensure continuity of care, essential for both the well-being and stability of a child.²

With the new federal child care measures set to take effect, states are rapidly building, evaluating, and changing their early care and education quality focused systems (Quality Rating and Improvement System (QRIS), professional development, licensing and standards). Implementation of the new regulations must align with these efforts for sustainability and maximum impact.

Over the past several years, Child Care Aware® of America has surveyed and conducted focus groups with parents of young children, grandparents, national child advocacy organizations, and state and local Child Care Resource and Referral (CCR&R) agencies. Those conversations underscored that child care is an essential building block

of any community and that investments in child care are investments in our children, our economy, and our future. Child care plays an important role in the economy, helping to generate 15 million jobs and more than \$500 billion in income annually.³ Families need child care so that they can work, go to school, and/or receive workforce training, and children need a safe place to be where they can learn and thrive.

What we have learned about child care from our member agencies, reports, state surveys and national polling

1. Child care is expensive.

Annually, states spend more than \$10 billion in government money for child care.

The cost of child care in every state rivals families' annual expenditures on housing, transportation and the cost of tuition at a four-year, public university. Further, in 38 states, the cost of infant care exceeds 10 percent of the state's median income for a two-parent family.⁴

Recent focus groups done by Child Care Aware® of America suggest that parents are trading off the nice-to-haves, including coverage that fits their schedules, against cost. Costs are high even for two parent families, and some families are making the decision to have one parent leave their job and stay home since the additional paycheck would just go directly to cover child care.⁵

Annually, states spend more than \$10 billion in government money for child care. For the most part, public funding for child care comes from the CCDBG, the Temporary Assistance for Needy Families (TANF) program, the Social Services Block Grant (SSBG or Title XX) and state funds. Even so, parents assume almost 60 percent of the cost of child care, and the percentage is even higher for middle income families.

For several years now, Child Care Aware® of America has surveyed CCR&Rs to gather current information about the average cost of child care in child care centers and family child care homes for infants, 4-year-old children and school-age children. Our 2015 Cost of Care report indicated that the average annual cost of full-time care for an infant in center-based care ranges from \$4,822 in Mississippi to \$17,062 in Massachusetts. For an infant in a family child care home the cost ranges from \$3,972 in Mississippi to \$10,666 in Massachusetts. For a 4-year-old, center-based care ranges from \$3,997 in Mississippi to \$12,781 in Massachusetts. Care in a family child care home for a 4-year-old ranges from \$3,675 in Mississippi to \$10,030 in Alaska.⁶

While many families are able to take advantage of child care subsidies offered by state and federal organizations, there is not enough funding to cover all need. In fact, Child Care Aware® of America estimates that child care assistance funds reach fewer than 18 percent of eligible children. Families who earn between \$25,000 and \$50,000 annually are among those who stand to benefit most from increased and expanded subsidy support for child care, as these families tend not to be eligible for subsidies, and therefore rely on unlicensed, unsafe or unreliable care.

Parents also rely on federal tax credits—for both families and employers—to help pay for child care. However, available tax credits are piecemeal, vary significantly from state to state, and provide an average benefit of only \$550 per year – well short of average child care costs. Further, benefits such as the Dependent Care Tax Credit (DCTC) are not available for parents who attend school part-time, which means that parents who both work and attempt to improve their economic condition through furthering their education are unable to receive additional support, thus fostering an unending cycle of poverty.

2. Quality child care needs to begin early.

Early, quality child care provides a solid foundation for children's academic and behavioral success. For instance, research has demonstrated that children and families who attend Early Head Start programs fare better than their peers in several domains; however, Early Head Start is underfunded and can only serve four percent of eligible children.⁷

Vulnerable populations, in particular, struggle to gain access to quality early child care due to barriers such as lack of transportation options and irregular work schedules. Many communities face shortages of licensed quality child care; these areas are known as child care deserts. Low-income and rural communities and neighborhoods are especially likely to lack high-quality child care facilities. Rural communities have unique needs and challenges far different from urban settings. For example, the majority of Hispanics live in rural settings.⁸ The lack of licensed child care, long travel distances to work sites, lack of public transportation and irregularity of work schedules reduce child care options available for rural families as well. Investments in child care expansion thus help to ensure that children have access to safe learning environments and that parents are able to contribute to the local economy.

Existing child care centers in underserved areas must work to address these issues by expanding child care hours and working with state and federal agencies to secure access for all families. Without these measures, families may be forced to rely on unlicensed care providers that may not be able to provide the emotional and academic support children need in order to be school-ready by the time they enter Kindergarten.

3. The quality of care varies widely by state.

Children in unlicensed care may not be protected by regulations concerning physical activity time, developmental screening practices or food safety guidelines. In fact, studies show that children of color, English language learners and low income families benefit greatly from quality child care, yet they are the least likely to gain access to high-quality early care and education.⁹

Investments in high-quality early education generate returns of over \$8 for every \$1 spent.

While the new CCDBG reauthorization in 2014 calls for stronger health, safety and quality measures, it remains to be seen how implementation of these measures will unfold. Thus, child care assistance is an important two generation strategy that helps parents and their children simultaneously.

Though the exact definition of quality child care evolves with new research, experts agree on some general characteristics that enrich early childhood environments, including:

- Low child/teacher ratios.
- Small group size.
- Professional development opportunities for workforce.
- Positive provider/child interactions.
- Accreditation or high licensing standards.
- Age appropriate activities.
- Family engagement.
- Good health and safety practices.

Quality Rating Information Systems (QRIS) at the state and local level are one way to track quality in child care settings. As of May 2016, however, QRIS implementations across states vary widely in status, from county- and locality-based systems in California to a pilot program in Alabama to full state-wide implementation in states such as Texas and Massachusetts. Many states, including Connecticut and Wyoming, are still in planning stages without any kind of QRIS system implementation.¹⁰

Investments in high-quality early education generate returns of over \$8 for every \$1 spent.¹¹ The science is clear: there are long-term positive outcomes for children who begin learning from birth, and for 15 million children in America each week, the child care setting is an opportunity to learn and set healthy habits for life. Decades of research emphasize that quality child care has a lasting positive impact, particularly for children from low-income homes.^{12 13 14}

4. Child care providers need to receive adequate training.

Approximately 2.2 million individuals earn a living caring for children under age 5. The early care and education landscape remains fairly complex, with programs offered in a variety of settings, designed to accommodate varying traditions and cultures, funded through multiple sources, and subjected to disparate regulations. In addition, more than half of the states only require that licensed child care providers possess a high school diploma.

- Thirty-one states require a high school diploma or less for child care center lead teachers.

- Forty-one states require a high school diploma or less for regulated family child care providers.¹⁵

Currently, there is national momentum to promote agreement on core knowledge and competencies for child care educators. In 2015, the Institute of Medicine (IOM) and the National Research Council (NRC) published a major study¹⁶ about the child care and education workforce. Given what scientists know about how the brain develops and about how children learn, the authors then asked, is critical brain science being applied in child care settings? Their answer was no, and that 1) the care and education workforce is under-respected and under-trained, and 2) an overhaul of our nation's child care systems is urgently needed.

Approximately 2.2 million individuals earn a living caring for children under age 5.

The IOM study describes the current status of the country's child care systems as "fragmented." The use of the word systems (plural) is intentional, as there is no single entity that governs and no single set of standards that applies to all early childhood education. Within child care itself, there are many systems with inconsistent standards for how child care settings are staffed, licensed (if at all), and operated. These include inconsistencies in educational and training requirements, licensing standards, and funding support and related quality requirements. If you add other early childhood education settings to the equation, the inconsistencies among standards and systems grow even larger.

5. Child Care Providers should be paid livable wages.

The average income for a full-time early child care worker in 2015 was just \$10.72 an hour, putting the wages of child care workers below those of 97 percent of all occupations in the American economy.

Not surprisingly, it is difficult to recruit credentialed child care professionals when compensation is so low. To be clear, despite the labor-intensive costs of running a child care business, according to a new report by the Economic Policy Institute,¹⁷ most child care workers live in poverty. Like many service industries, approximately 80 percent of the cost in a child care program is for payroll and payroll related expenses. Despite tremendous responsibilities, the average income for a full-time early child care worker in 2015 was just \$10.72 an hour, putting the wages of child care workers below those of 97 percent of all occupations in the American economy.¹⁸

Almost 15% of child care workers live below the poverty line, and a third have incomes that are below twice the poverty line. Early childhood education teachers are half as likely as general employees to be offered health insurance coverage, and only 24 percent of employers in the field offer retirement plans.¹⁹ The gap becomes even more pronounced when college degrees are taken into consideration,

with early childhood education workers earning only one-third of the average income of other workers in the country. Further, while the number of immigrant workers in the field of early childhood education has tripled since 1990, these workers are significantly more likely to live below the poverty line than their native counterparts.²⁰

Not surprisingly, many child care workers are unable to afford child care for their own families. According to Child Care Aware® of America's 2015 calculations, in every state, child care workers would need to spend over 80 percent of their income in order to afford center-based child care for two children. According to the US Department of Health and Human Services' standard of affordable care, there is no state in which early childhood education employees' average earnings are high enough to meet the standard as compared to the average cost of child care.²¹ Further, in six states plus D.C., over 100 percent of the median child care worker's income is required to put two children in center-based care.²² Furthermore, there is little to no support from the government for families working in early childhood education, with nearly half of all early childhood education employees living in families eligible for programs such as TANF and SNAP.^{23 24}

Major research studies have found correlation between higher wages or higher teacher education levels with quality of child care, emphasizing the importance of attracting and maintaining a talented workforce. Consistent, stable relationships with adults are especially impactful in childhood development, making increased investment in compensation for the providers who work with children very important. In addition, early childhood education workers who are paid higher wages express lower levels of economic worry, allowing them to provide more nurturing, warm and stress-free care for children.²⁵

To date, sustained investments in child care providers—both through compensation and training—have not been sufficient to ensure that all providers, including those who receive federal reimbursement for their services, meet even minimal quality standards. It's important that education is adequate to ensure optimal child outcomes, and that compensation is appropriate for the level of education achieved.

6. Child Care needs to be accessible to a linguistically and culturally diverse population.

Child care centers and homes in the United States must be prepared to serve an ever changing and increasingly diverse group. The expansive growth of this demographic highlights the need for settings that consider the language and culture of the children being served. Children of refugees and immigrants now account for 25 percent of the 23 million children under the age of 6, compared to 14 percent in 1990. States like California, Texas, New York, Florida, and Illinois account for half of the number of children in immigrant families. Research has

shown that these young children, especially dual language learners, benefit from quality child care.²⁶

Children of refugees and immigrants now account for 25 percent of the 23 million children under the age of 6, compared to 14 percent in 1990.

Unfortunately, poor-quality care has negative impacts on development, especially for low-income and minority children. Young children of immigrants, African-American and Latino children are less likely to access quality child care programs.^{27,28} According to a March 2014 U.S. Department of Education report, boys and African American children are disproportionately expelled or suspended from early care and education programs. For preschool programs outside state prekindergarten systems, the rates were far higher. Thirty-nine percent of child care providers reported at least one expulsion in the past year, an expulsion rate more than 13 times higher than in children in K-12 schools.²⁹

Although the early childhood education workforce is currently relatively diverse, it is far from matching the diversity of children in the US, and maintaining and growing this diversity in the workforce is extremely important. Children from minority groups benefit from working with teachers and caregivers from similar linguistic, racial or ethnic backgrounds.³⁰ In addition, children benefit from exposure to educators and caregivers from diverse backgrounds at an early age as they develop early perceptions of social categories.³¹

CCAOA's Fact Sheets Provide Critical State- Level Data

To remain competitive in the 21st-century global economy, the United States must recognize the value of child care as an investment in early childhood education and as a support system for working families. *Child Care in America: 2016 State Fact Sheets* provides important data to better understand America's working families and the circumstances they face. As such, it is a critical tool for child care advocates, policymakers and program administrators to guide decision-making about child care programs and costs.

This annual report uses federal and national data and information from state Child Care Resource and Referral (CCR&R) agencies and other state agencies to report on the following data broken into three separate reports per state:

- Child care facts including:
 - data on infants and toddlers and school age care
 - family characteristics related to the need for child care
 - the supply of child care

- the cost of child care
- the child care workforce
- The services provided by and role of CCR&Rs in each state.
- Participation in state initiatives for:
 - quality
 - health and wellness
 - family engagement
 - emergency preparation

Methodology

Early in 2016, Child Care Aware® of America surveyed State CCR&R Networks and other CCR&Rs and asked questions about child care capacity, requests for referrals, training and technical assistance provided by CCR&Rs and the average price for full time care child care centers and family child care homes for three age groups. CCR&Rs work with parents, child care providers and local and state governments within communities in every state to strengthen the quality of care and are uniquely positioned to provide this data. This year, for school-age care, CCR&Rs reported on the price of care for a nine-month programs, full-year programs, and summer programs. We defined child care centers as all center-based child care providers, including Head Start programs, license-exempt programs, school-based programs and state-funded prekindergarten.

Additional national and state data were gathered in the spring of 2016 from the American Community Survey, U.S. Census Bureau; the Office of Child Care, U.S. Department of Health and Human Services; the Bureau of Labor Statistics, U.S. Department of Labor; and the College Board Annual Survey of Colleges.

For some states, the cost of care was derived from the latest market rate survey available. Rates based on information collected prior to 2015 were adjusted by the Consumer Price Index (i.e., reported in 2015 dollars using the Bureau of Labor Statistics Consumer Price Index Inflation Calculator). National totals are rounded estimates. All missing information is reported as "NR" (Not Reported). Alabama, DC, Michigan, New Jersey and South Carolina did not respond to our survey. In these states, cost of care data was pulled from our 2015 survey and adjusted for inflation where applicable.

Conclusion

Ensuring that all children have access to high quality and affordable early childhood programs is essential; however, in every state, this type of care can be hard to find and difficult to afford. Although the reauthorization of the Child Care and Development Block Grant Act has raised the floor for health and safety standards and encourages quality programming for all child care settings, there is still much work to be done. In particular, researchers have identified the education and training of child care providers as one of the most important components of a quality child care setting.

To improve the state of U.S. child care nationally, we MUST work together to find meaningful solutions that support working families and their children.

Quality child care benefits everyone: it promotes positive developmental outcomes for children and allows parents to pursue their own education and career goals, eventually increasing their earning potential and their contribution to the economy. To improve the state of U.S. child care nationally, we MUST work together to find meaningful solutions that support working families and their children.

State Child Care Facts in the State of: Alabama

CHILD CARE NEED¹

POPULATION	ALABAMA	UNITED STATES
Total residents	4,849,377	318,857,056
Children age birth to 4 years	291,160	19,757,997
Children age birth to 4 years living in poverty	88,958	4,658,187
Children age 5 to 11	428,834	28,761,402
Total families with children	486,248	33,106,587
Single parent families	180,109	10,993,697
Families in poverty	133,594	6,603,926

CHILDREN UNDER AGE 6 POTENTIALLY IN NEED OF CHILD CARE	ALABAMA	UNITED STATES
Children in two-parent families, both parents in labor force	107,342	8,441,764
Children in single-parent families, parent in the labor force	103,664	6,360,521
Total children under age 6 potentially needing child care	211,006	14,802,285

NUMBER OF WORKING MOTHERS	ALABAMA	UNITED STATES
With infants under one year	34,483	2,435,563
With any children under age 6	138,703	9,721,156
With children under age 6 only	80,335	5,422,464
With both children under age 6 AND children age 6 to 17	58,368	4,298,692
Married working mothers	209,429	15,306,983
Single working mothers	116,238	6,749,078

AVAILABILITY OF CHILD CARE²
