

*Checking In: A Snapshot of the Child Care Landscape*  
**CCAoA's Annual State Fact Sheets**

# Introduction

To remain competitive in the 21st-century global economy, the United States must recognize the value of child care as early childhood education, in addition to its value as a support system for working families. Research evidence is incontrovertible that children who participate in high-quality programs during their early years demonstrate lasting effects on IQ, boosted academic and economic achievement, and lower incidences of childhood obesity and chronic illness. Assistance such as the federal Child Care and Development Block Grant (CCDBG) is, therefore, pivotal to supporting quality child care in the nation. Strategically, states are already investing CCDBG funds in raising the quality of child care programs, as well as in efforts to improve affordability of and access to child care that support workforce participation throughout the economy, because investing in higher quality has proven to result in a 13 percent return on that investment, per child, per year.<sup>i</sup>

Every year since 2006, Child Care Aware<sup>®</sup> of America has published a set of state fact sheets to illustrate how states measure up on areas of quality, affordability, and access to child care. Statistics reported on state fact sheets are calculated from federal databases and state-level information collected annually from Child Care Resource and Referral (CCR&R) agencies. These fact sheets serve as a guide for state and community-level decision-makers, policy makers, child care advocates and program administrators.

*Child Care in America: 2016 State Fact Sheets* shares important data to better understand the child care market facing America's working families, and how often it fails to provide for their immediate needs and long-term goals for their children's success. Thus, these fact sheets can be critical tools for child care advocates, policymakers, and program administrators, guiding their decisions about strategies to support child care program quality while keeping family costs down and expanding access for the most at-risk children. Federal and national data, data and information from state CCR&R agencies, and from other state agencies are provided in three separate reports for each state:

- Child care facts, including: data on infants, toddlers, and young children; the supply of child care; the cost of child care; and the child care workforce.
- Services provided by and the role of CCR&Rs in each state.
- Participation in state initiatives for: quality; health and wellness; family engagement; and emergency preparation.

## Investing for the Return

As those who guide CCDBG investments make decisions based on these data, a focus on three long-standing needs continues—for quality, affordability, and access. Each category for investment has a compelling case.

### 1. Increase quality of care.

Research shows quality child care programs (e.g., similar to Early Head Start in standards) contribute to the overall short- and long-term success of children and families. Improving the quality of child care begins with a focus on its workforce. A study published by the Institute of Medicine and the National Research Council stated that studies on child brain development are not being applied to teaching methods in the child care setting.<sup>ii</sup> Continuing education and coordinated

professional development would keep our child care workforce informed and trained on the most effective ways to provide early education for young children. Stability of children's daily experience through retention of this workforce would also increase the quality of care. Yet, the child care industry struggles to recruit and retain credentialed professionals, in part due to low compensation. An estimated 2.2 million people work in the early childhood workforce across the country caring for nearly 15 million children under 6. In 2016, the average annual salary for child care classroom staff in the United States was \$22,310, with providers in some states making as little as \$18,800 on average.<sup>iii</sup> Sadly, many child care staff members cannot afford to enroll their own children in child care. As we noted in our *Parents and the High Cost of Child Care: 2016 report*, child care workers in every state pay more than half their salaries to cover the costs of child care for two children.

## 2. Decrease Cost Burden for All Families

In 2016, according to our *Parents and the High Cost of Child Care: 2016 report*, the cost of infant child care in 49 states plus the District of Columbia exceeded 7 percent of the state median income for a two-parent family, a threshold established by the U.S. Department of Health and Human Services as the standard for affordable child care. Some families, based on state-determined income guidelines, are eligible for child care subsidies, and many more are eligible for state or federal tax credits to help cover high costs of care. However, tax credits cannot be the only solution to decreasing the cost burden borne by families. Despite the high cost of child care for all families, not all are eligible for credits; in addition, once-a-year rebates can provide limited assistance for families shouldering child care costs year-round. For more information on tax credits, please see our *Parents and the High Cost of Child Care: 2016 report*.

The CCDBG reauthorization law of 2014 makes significant advancements over earlier versions of the law by defining health and safety requirements for child care providers, outlining family-friendly eligibility policies, and ensuring that parents and the general public have transparent information about the child care choices available to them. The CCDBG has also been a primary source of assistance to low-income families. However, investments in CCDBG have not been enough; CCDBG funding has not kept pace with inflation or the current demand for care across the country. A recent analysis of the CCDBG funding by the Center for Law and Social Policy suggests that patterns of investments have not kept up with demographic shifts. A study by the Office of the Assistant Secretary for Planning and Evaluation on FY 2012 revealed only 15% of the 14.2 million children eligible for subsidies through CCDBG receive the subsidy,<sup>iv</sup> and in 2016, the number of children supported by CCDBG reached a 15-year low.<sup>v</sup>

## 3. Accessibility for All Families

**Low-Income Families.** In many areas of this country, low-income and rural communities are [child care deserts](#), which CCAoA defines as areas or communities with limited or no access to quality child care. Families in these areas have difficulty finding even licensed child care, let alone higher quality. Low-income populations require custom-built supports, as the most at-risk population. Low wages and unstable sources of income, along with the non-traditional and changeable work hours of swing shift employment create special challenges to finding quality child care.

**Single-Income Homes.** Households with a single income, likewise, need special attention. Across all 50 states, the cost of center-based infant care averaged more than 40 percent of the median income for single mothers,<sup>v</sup> 33 percent higher than the federally recommended cost. Strategic use of child care subsidies has been linked to increasing the likelihood of a single mother being employed full-time.<sup>vi</sup>

### Coming Fall 2017:

*Fifteen state deep dives into child care deserts where we identify child care deserts and develop customized maps of child care supply and demand issues specific to states' needs and targeted priorities.*

**Millennials.** Millennials also present unique challenges related to access. They face an unemployment rate 40 percent higher than the national average. For those lucky enough to be employed, the average cost of center-based infant child care in the U.S., adjusted for inflation, exceeds [27 percent of millennial median income](#). That figure is 20 percent higher than the federally-recommended 7 percent. Millennial parents who are still in school, similar to lower-income and single-income households, also require non-traditional hours of care.

**Families of Children with Special Needs.** Families of many children with special needs struggle to find placement in care of sufficient quality to help them succeed and reach their highest potential. Spaces for children with special needs are limited and families often have difficulty finding a program with the capacity to care for their child in ways that optimize all their developmental potential. In focus groups held by Child Care Aware® of America in 2016, parents of children with special needs expressed particular difficulty accessing any affordable child care. One parent relayed their experience of having found child care prior to their child's birth, only to be told that that provider could not admit children with special needs. Others noted they had had to move their child to different providers several times due to behavioral issues and the child's expulsion from the program.

The fact sheets that follow provide support for our recommendation to increase investment in child care, through expanded CCDBG funding. The U.S. must quickly recognize the value of child care as a setting in which early childhood education is already occurring. Recognizing that value, in addition to the value child care has long had as a support system for working families, will enable our country to remain competitive in the 21st-century global economy. These data indicate that many of our states are already investing CCDBG funds in raising the quality of child care programs, as well as in supports for workforce participation throughout the economy. This country needs expanded investments in all three: quality, affordability, and access.

<ul style="list-style-type: none"> <li>• Parents as Teachers (PAT)</li> <li>• Strengthening Families Program (SFP) Initiative</li> <li>• Triple P</li> </ul>

Note: These programs represent only those reported in Child Care Aware of America's 2016 survey, and may not reflect all Family Engagement Programs offered within the state.

<sup>1</sup> This field only denotes whether services were provided; not all child care providers and not all states may have experienced an emergency in 2016.

## Methodology

For this report, *Child Care in America: 2016 State Fact Sheets*, Child Care Aware® of America surveyed State CCR&R Networks and other CCR&Rs in February 2017, with questions about child care capacity in their states, requests for referrals to child care programs, training and technical assistance provided by CCR&Rs to the child care workforce, and the average price for full time care child care centers and family child care homes, for three age groups. We defined child care centers as all center-based child care providers, including Head Start programs, license-exempt programs, school-based programs and state-funded prekindergarten. This year, for school-age care, CCR&Rs reported on the price of care for nine-month programs, full-year programs, and summer programs. Rates based on information collected prior to 2015 were adjusted by the Consumer Price Index (i.e., reported in 2015 dollars using the Bureau of Labor Statistics Consumer Price Index Inflation Calculator).

CCR&Rs are uniquely positioned to provide these data, through their work with parents, child care providers and local and state governments in every state.. Additional national and state data were gathered in the spring of 2016 from the American Community Survey, U.S. Census Bureau; the Office of Child Care, U.S. Department of Health and Human Services; and the Bureau of Labor Statistics, U.S. Department of Labor. National totals are rounded estimates.

All missing information is reported as “NR” (Not Reported); all information that is not applicable to a state (i.e., because it may not be collected by them) is reported as “NA” (Not Applicable). For some states, the cost of care was derived from the latest market rate survey available. Maine, Mississippi, Pennsylvania, and Texas did not respond to our survey. In these states, cost of care data was pulled from our 2015 survey and adjusted for inflation where applicable.
