Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank thread Alaska for generously providing the data needed to complete this analysis.**

Findings

The state of Alaska is divided into 19 organized boroughs and 10 Census areas. Statewide, married couples with children can expect to pay 11.7% of household income for center-based infant child care. Child care for this age group and provider type is least affordable in Fairbanks North Star Borough, North Slope Borough, and Dillingham Census area. In Fairbanks North Star Borough, families can expect to pay almost 5% more than the state-wide average for center-based infant child care. Center-based child care for 4 year olds is least affordable for families in Bethel, Fairbanks North Star Borough, and Juneau.

As with center-based child care, home-based child care for infants is least affordable in Fairbanks North Star Borough. Families can expect to pay over 3% more than the statewide average for child care for this provider type and age group. For family child care of four year olds, there were no significant differences found between state-wide and local affordability. Overall, families in most areas of the state could expect to pay around 8% of annual median income towards this type of child care.

Table 1: Least Affordable Counties for Infant Child Care by Type of Care

Rank	Borough or Census Area	Average Annual Price of Infant Care*	Percent of Median Income: Married Couple with Children	Difference between County-Level and Statewide Affordability**

→ Delaware

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Children & Families First for generously providing the data needed to complete this analysis.**

Findings

The state of Delaware is comprised of 3 counties: Kent, New Castle, and Sussex. Statewide, the average price of center-based infant child care costs 11.2% of median income for married couples with children. No county exceeds this affordability percentage for this provider type and age group.

The affordability percentage for center-based child care for 4 year olds is 9.0% of median family income statewide. There were no significant differences between county and statewide affordability for this provider type and age group.

Family child care for infants is least affordable for families in Kent County. While the statewide affordability percentage for this provider type and age group is 7.8%, the price families in Kent County 8.4% of median family income. Child care for four year olds in family settings is slightly less affordable in Kent County, but the difference between statewide and county affordability is less than one percent.

Overall, there were few differences found between state and county-level affordability percentages for each provider type and age group.

To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Iowa Child Care Resource & Referral for generously providing the data needed to complete this analysis.**

Findings

The state of Iowa is made up of 99 counties. Center-based infant child care is least affordable for families in Decatur County, with married couple families with children expecting to pay 18.4% of income towards this type of child care. Poweshiek County and Wapello County were the second and third least affordable counties for this provider type and age group. These same three counties are also the least affordable for families seeking center-based child care for four year olds.

Statewide, married couple families needing center-based infant child care can expect to pay an average of 8% of household income. Pocahontas County is the least affordable, with families expecting to pay more than 11% of household income on this type of care. Home-based child care for 4 year olds has a similar picture. The least affordable counties for this provider type and age group are: Pocahontas County, Wayne County, Van Buren County, Cass County, and Henry County. When comparing this list to Table 1 below, we see that 4 of the 5 counties that were least affordable for family child care for infants were also least affordable for 4 year olds in family child care settings.

Table 1: Least Affordable Counties for Infant Child Care by Type of Care

**Affordability, or Percent of Median Income, is a comparison of average price against county median income. The state affordability percentage was subtracted from county affordability percentage. A positive percentage difference indicates that the average county affordability exceeds the average statewide affordability.

→ Maryland

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank the Maryland Family Network for generously providing the data needed to complete this analysis.**

Findings

In the state of Maryland, there are 23 counties and 1 independent city. Statewide, center-based child care or an infant costs families an average of 12.6% of median income for married couples with children. There are 9 counties that exceed this statewide average. For example, prices for this provider type and age group in Somerset County cost families 15.1% of median income. Somerset County is also the least affordable county for families of four year olds in center-based child care.

The statewide average for infants in family child care is 8.9%. Prices in four areas exceed this affordability percentage: Frederick County, Prince George's County, Montgomery County, and Baltimore City. In Frederick County, the average price of child care for this provider type and age group comprises 11.8% of median family income.

Baltimore City, the largest city in Maryland, is the least affordable area for families with four year olds in family child care. While the statewide average amount spent on this age group and provider type is 6.8% of median income, the affordability percent in Baltimore City is 9.2%.

Table 1: Least Affordable Counties for Infant Child Care by Type of Care

**Affordability, or Percent of Median Income, is a comparison of average price against county median income. The state affordability percentage was subtracted from county affordability percentage. A positive percentage difference indicates that the average county affordability exceeds the average statewide affordability.

→ Massachusetts

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Child Care Circuit and the Massachusetts CCR&R network for generously providing the data needed to complete this analysis.**

Findings

The state of Massachusetts is made up of 14 counties. At the county level, center-based infant child care ranged from 13% to nearly 20% of median income for a married couple with children. Suffolk, Hampden, and Essex Counties are the least affordable for this type of child care. The city of Boston, which has a higher cost of living compared other cities in the state, is located in Suffolk County.

Family child care for infants and four year olds ranges from 8% to nearly 13% percent of the median income for a married couple with children. On average, the price of family-based child care for infants in Nantucket County costs the largest share of a median family income for both infants and four year olds - 12.9% and 13.6% respectively. It is important to note that Nantucket County is located on Nantucket Island, which has a much wealthier population when compared to the rest of the state.

→ Minnesota

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Child Care Aware® of Minnesota for generously providing the data needed to complete this analysis.**

Findings

There are a total of 87 counties in the state of Minnesota. Statewide, the price of center-based infant child care comprises 15.3% of median income for married couples with children. Ramsey County is the least affordable county for this type of child care, where the average is nearly 3% more than the statewide average. Families in other highly populated counties also experience unaffordable child care prices. Ramsey, Anoka, and Hennepin Counties are part of the Twin Cities metropolitan area, where the cost of living is slightly higher compared to the rest of the state. This may partially explain why center-based infant child care is less affordable in these counties. Cook County and Nobles County have lower populations compared to the rest of the state, with fewer providers. This could partially explain why center-based child care for infants is higher in these counties.

In 38 counties, the price of family child care for infants is more than the statewide average of 8% of median annual income. Cook County is the least affordable county, with families expecting to pay 14% of income towards this type of child care. Grant and Pine Counties are also slightly less affordable for families seeking this type of child care. It should be noted that the three least affordable counties for family-based infant child care have smaller populations when compared to the rest of the state. Consequently, these counties have smaller supplies of family child care providers that serve infants.

**Affordability, or Percent of Median Income, is a comparison of average price against county median income. The state affordability percentage was subtracted from county affordability percentage. A positive percentage difference indicates that the average county affordability exceeds the average statewide affordability.

→ Missouri

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Child Care Aware® of Missouri for generously providing the data needed to complete this analysis.**

Findings

The state of Missouri is comprised of 114 counties and 1 independent city. Statewide, center-based child care for infants costs married couple families 11.6% of median income. Prices for this provider type and age group exceeds the statewide affordability average by at least 2% in Boone County and Greene County.

Overall, center-based child care for 4 year olds does not significantly exceed the statewide affordability percentage. This means that this type of child care does not significantly cost families more in any particular county.

While the statewide affordability percentage for family-based infant child care is 6.7%, Jasper County and Newton County both exceed this percentage by at least 4%, meaning that this type of child care is less affordable in these 2 counties.

For family-based child care of 4 year olds, the statewide affordability percentage is 5.8%. In all, 4 counties exceed this affordability percentage by at least 3% (Wright, Jasper, Buchanan, and Pulaski Counties).

Table 1: Least Affordable Counties for Infant Child Care by Type of Care

**Affordability, or Percent of Median Income, is a comparison of average price against county median income. The state affordability percentage was subtracted from county affordability percentage. A positive percentage difference indicates that the average county affordability exceeds the average statewide affordability.

A positive percentage difference indicates that the average county affordability exceeds the average statewide affordability.

→ Nevada

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. The child care prices for each county were taken from the 2018 Market Rate Survey conducted by the state of Nevada and adjusted for inflation to estimate price increases. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank The Children's Cabinet for generously providing the data needed to complete this analysis.**

Findings

In the state of Nevada, there are a total of 16 counties and 1 independent city. Clark County, the most populous county in the state and home to Las Vegas, is the least affordable for center-based infant child care. While the statewide average for this provider type and age group is 14.2% of median family income for married couples with children, the county average is 16.2%. Child care also costs families in Nye County slightly more than the statewide average for center-based infant care. As with infants, center-based child care for 4 year olds is least affordable for families in Clark County, Nye County, and Washoe County.

Family child care for infants is least affordable in Mineral, Clark, and Lyon Counties. While the statewide affordability average is 11.3% of median income for married couples with children, these 3 counties exceed the statewide average by 0.6% to 2.1%. At the county level, family-based child care for 4 year olds ranges from 9% to 13% of median family income. The statewide affordability average for this provider type and age group is 10.4% of median family income. Mineral County, Carson City, and Clark County all exceed this average, meaning that family child care for 4 year olds is less affordable in these areas.

Table 1: Least Affordable Counties for Infant Child Care by Type of Care

Rank	County	Average Annual Price of Infant Care*	Percent of Median Income: Married Couple with Children	Difference between County-Level and Statewide Affordability**

A positive percentage difference indicates that the average county affordability exceeds the average statewide affordability.

→ New Hampshire

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Child Care Aware of New Hampshire® for generously providing the data needed to complete this analysis.**

Findings

The state of New Hampshire consists of ten counties. Both Carroll County and Coos County are the least affordable for center-based infant child care, costing on average 13.9% of median family income. Both counties are less populous when compared to the other counties in New Hampshire, meaning demand for child care may be higher here than in more populous counties. As with center-based infant child care, center-based child care for 4 year olds was least affordable in Carroll County and Coos County. The price of this type of care comprises over 12% of median family income in both counties.

In family child care homes, families in New Hampshire with infants can expect to pay an average of 11.7% of median annual household income statewide. This type of child care for this age group is least affordable for families in Carroll County and Sullivan County, where each affordability percentage exceeds the statewide average by over 2%.

Families in Carroll County with four year olds can expect to pay 12.5% of median income on center-based care. Again, families in this county are spending the highest percentage of their income on child care compared to other counties in New Hampshire, as the price is 2.7% higher than the child care statewide average. Family child care for four year olds is least affordable in Belknap and Carroll Counties, with families paying an average of 11% of their median income for this type of child care.

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Oklahoma Child Care Resource & Referral Association, Inc. for generously providing the data needed to complete this analysis.**

Findings

The state of Oklahoma is divided into 77 counties. Statewide, the affordability percentage for center-based infant child care is 11.7%. Delaware County ranks as the least affordable county for this type of child care. Delaware County has a lower population count and lower median income, which may factor into this lack of affordability.

Dewey County is the least affordable county for center-based child care of 4 year olds, exceeding the state's affordability percentage by 3.4%. This means that child care for this provider type and age groups comprise a larger share of family income when compared to the rest of the state.

Statewide, infant child care in family child care settings costs on average 9.3% of family income. There are twelve counties that exceed the state's average, meaning that this type of care is less affordable. Kingfisher County is the least affordable, comprising 12.7% of median family income.

Delaware County is the least affordable county for family-based child care for 4 year olds, costing families over 12% of median income.

A positive percentage difference indicates that the average county affordability exceeds the average statewide affordability.

→ Wisconsin

Methodology

Child care prices are reported at the county-level for infant child care and child care for four year olds where available across the state. To determine the affordability of child care prices by county, we compared the average price of center-based and family child care to household median income by county. Affordability was calculated by dividing the average price of care in that county by the county's median income as reported by the U.S. Census Bureau's American Community Survey (ACS 5-year estimates, 2013-2017, Table B19126). **Child Care Aware® of America would like to thank Supporting Families Together Association for generously providing the data needed to complete this analysis.**

Findings

In the state of Wisconsin, there are a total of 72 counties. In every provider type and age group of child care that we examined, Milwaukee County was the least affordable for families. This county is home to Milwaukee, the most populous city in the state.

Statewide, center-based infant child care costs families an average of 13.4% of median household income for a married couple with children. Child care for this age group and provider type are least affordable in Milwaukee County and Adams County. Family child care for infants is also least affordable in Milwaukee County, where prices are an average of 3.1% higher than the statewide average for this age group and provider type.

Statewide, center-based child care for 4 year olds costs 10.8% of median family income for a married couple with children. Child care for this provider type and age group cost families in Milwaukee slightly more than the statewide average (13% of household income for a married couple with children). There was not a significant difference between county-level and statewide affordability. The affordability of family child care for 4 year olds was similar, costing families in Milwaukee County slightly more when compared to the statewide average.
